Main Tech

- TypeScript, JavaScript
- React
- Node.js, Express, NestJS
- REST, GraphQL
- Next.js, Remix
- AWS, GCP, Heroku
- PostgreSQL, MySQL, SQLite
- NoSQL DBs, Firebase, DynamoDB, MongoDB
- PHP
- Claude Code

Contributions

- material-ui
- mdn/content
- DefinitelyTyped
- reactstrap
- jest-extended
- mkdir-tree
- react-online-hook

Up Next

- In-depth Docker & Terraform
- Data analytics in Python
- Go

- 8+ years of full-time professional experience building & continuously improving software serving millions of users and generating multimillion-dollar revenue
- Product mindset, user-centricity, extreme ownership and deep care of overall UX are built in
- Built projects from non-technical stakeholder input to paying customers and beyond
- Built systems serving as the backbone of entire businesses within teams & as a solo eng
- Most experienced in PERN & LAMP but quick to pick up new tooling
- A strong team-player at core with a very collaborative, 0-hierarchy leadership style
- StackOverflow 2.8K+
- Self-taught

Full Stack Engineer | eSIM Go | 09/2026 - present

Web Developer & Consultant | Freelance | 04/2016 - present

- Generated $1M+ overall via integrations, automation, stronger data integrity & new features
- Cut infra & hosting costs up to 60% across multiple orgs
- Decreased delivery time by up to 80%
- Modernised several major projects, boosting performance & uptime up to 11x
- Boosted productivity ~10% through automation of business operations using cloud infrastructure & custom tooling
- Cumulatively saved 5+ years of manual work through systems integration
- Launched 10+ new projects with steady YoY revenue growth

Squad Leader | RepeatMD | 02/2025 - 02/2026

- Saved 200+ hours of development & debugging time by thoroughly clarifying requirements & priorities on all levels, including collaboration with direct stakeholders & executive sponsors
- Implemented Salesforce & NetSuite integrations to unlock back-office data-driven features & shorten the average collection period by 30%
- Built the backend of an async AI-based pipeline that cut demo preparation time for the CX team from hours to minutes
- Designed & built several AI-based features, pipelines and automations that cumulatively saved about 1 hour per day for each CX agent
- Ran a large, AI-assisted refactor of the BDD test suite, fixing most sources of flakiness & decreasing false-positive CI failures by 70%
- Architected an Algolia integration that significantly improved search UX & introduced search analytics that increased sales by 4% per platform on average
- Drove a complete restructuring of the multi-tenant admin experience to save enterprise users hours of work per year
- Onboarded 5 new members of the team & mentored 3 engineers
- Documented several important internal flows, saving hours in local setup & testing

Senior Software Engineer | RepeatMD | 09/2023 - 01/2025

- Led certain aspects and contributed to the implementation, polishing & launch of a new product type that generated $1M+ in revenue within its first 3 months
- Contributed to the planning & implementation of several features that unlocked a 10x jump in Black Friday and Cyber Monday sales as compared to the previous year
- Saved 200+ hours of team dev time by refining task definitions, knowing when to push back / adapt scope & shaping key architectural decisions across several growth features to accommodate future needs
- Resolved 20+ bugs, including some of the most long-living & hardest to reproduce in the codebase
- Went from zero BDD experience to an early adopter & one of the org's go-to people for all things BDD
- Implemented performance improvements accelerating several parts of the backend up to 60%

Senior Software Engineer | smol | 10/2022 - 08/2023

- Consolidated legacy codebases into a single Next.js app, cutting client-side bugs & testing costs while improving site performance
- Reduced advertising costs by 10% as a direct result of the performance improvements
- Extended unit testing coverage, lowering regression bug risk & increasing QA velocity by ~5%
- Improved tech documentation & development guidelines, boosting development velocity by ~10% on average
- Authored data-protection features that kept the company compliant with local regulations in key markets

Personality

- Autonomous & independent
- Comfortable taking decisions
- Comfortable working through uncertainties
- Strong sense of ownership
- Quality focused
- Thorough
- Fast learning
- Always ready to both learn & share knowledge
- Straight, clear & transparent in communication

Languages

- English: Advanced
- Spanish: Advanced
- Russian: Native

Education

- Master's Degree in Management, Promotion & Advisory in Real Estate Universitat de Barcelona, 2017–2018
- Bachelor of Arts in Business & Design Management EU Business School, 2014–2017

Senior Software Engineer | Devo | 07/2021 - 09/2022

- Delivered a drama-free public release of Devo Exchange from the ground up
- 30+ on-demand security tools became instantly available to users
- The app turned into one of the main references for the next iteration of Devo's proprietary design system
- Extensible, easy-to-integrate design drew interest from other internal teams & the community, resulting in the quick addition of new content types
- Reduced bundle size 3x versus initial estimations while continuing to ship new features
- Onboarded & trained engineers joining mid-project, making sure the team hits delivery targets
- Automated and participated in refinements of development processes, practices & guidelines to increase development velocity by 20% and cut release preparation time by 35% using custom Node.js scripts, GitLab CI/CD & webpack-based tooling

Frontend Developer | Opticks Security | 07/2020 - 06/2021

- Look & feel of the entire Web application was dramatically improved
- Several major releases were seamlessly deployed
- Frontend development automation tooling was enhanced with new capabilities
- DX was substantially improved, which increased development velocity
- The project was significantly re-structured for easier maintenance & shorter development cycles
- Several security-oriented features were developed from the ground up
- Refined & implemented one of the most demanded access control-related security features for the admin app
- Boosted the performance of the application by introducing recently released react-query, reducing network payload by 35% per session

Full Stack Developer | ModelManagement | 12/2019 - 06/2020

- A strong base for migration of the project's frontend part was built from scratch & covered with unit tests, hitting a zero regression rate and improving test coverage by 10%
- Some required low-level tools were set up & implemented into the new frontend base (routing, translation system, image processing tools, etc.)
- An independent sub-platform (Model Academy) was built using a modern stack & released
- Vue was introduced into the existing project to facilitate future migration
- New landings, pages & exciting features were released

Lead Web Developer | Suitaprest | 05/2019 - 11/2019

- Developed & tested new React-based forms that provide enhanced UX
- Modularised and reorganised the architecture of several projects, increasing test coverage by 60% and reducing regression bugs practically to 0
- Led the development of internal automation tooling to save about 40 minutes a day for each person in the sales team
- Led the development of an API using PHP & PostgreSQL to enhance affiliate collaborations, resulting in a 20% sales increase and a 10% improvement in affiliate traffic conversion rate
- Common code style was enforced across all tech projects
- Implemented automated testing, e2e testing & code coverage tools
- A dozen web projects were successfully delivered

Web Developer | Suitaprest | 04/2018 - 04/2019

- A new website with greatly improved UX & extended functionality was built
- Site infrastructure was significantly improved
- The existing codebase was greatly improved, standardised & covered with unit tests
- Handling of IT projects shifted towards a more structured and well-organised approach
- Introduced & promoted several additional security layers and security best practices, ensuring the uninterrupted functioning of the website during its entire 4+ year lifespan
- Advocated for development best practices to develop the frontend 2 months faster than planned
